SUMMARY

Fullstack developer with 6+ years of commercial experience across frontend, backend, and product engineering, the last 3+ centered on the React ecosystem. I own features end to end — designing data models and APIs on the backend and shipping the production UI on top — with a strong track record building complex onboarding funnels, role-based platforms, and third-party integrations for a Korea-focused edtech product. Comfortable working autonomously in a distributed, English-speaking team. Open to remote roles and relocation.

EXPERIENCE

Fullstack Developer (Frontend-leaning)

2022 – Present

Habsida — Naonow (edtech platform matching students with mentors)

- Sole frontend owner and active backend contributor on **Naonow**, a mentor–student matching platform serving the Korean market — driving features from database schema and API design through to production UI across student, mentor, and admin roles.
- Designed and shipped a **V2 mentor-matching onboarding funnel** — building both the backend matching logic (scoring, tie-breaking, match indicators) and the frontend flow (match-results screen, post-booking trust screen) — replacing a manual consultative call and removing **1–2 hours** of human coordination per signup.
- Implemented **role-based access and lifecycle logic** end to end for student / mentor / admin, including server-side permission handling, mentor visibility states, and an admin SQL query editor for the operations team.
- Built **conversion analytics and server-side event tracking** (Meta CAPI, dataLayer, an event-outbox pattern for reliable delivery) across the trial and booking funnels, giving the growth team trustworthy end-to-end attribution.
- Architected and integrated **Channel.io** to replace the legacy chat stack, designing a backend composite member-ID model for multi-student households with HMAC identity verification.
- Owned the **GraphQL / Apollo Client** data layer (schema, resolvers, client cache) and added multilingual support (i18n); maintained both SPA and SSR/SSG surfaces in **React and Next.js**.

Fullstack Developer

2021 – 2022

Wildberries — marketplace / e-commerce

- Developed and maintained internal and customer-facing web applications for one of the region’s largest e-commerce marketplaces, building frontend features in React with TypeScript / JavaScript in close collaboration with backend teams on API contracts.

Backend Developer

2020 – 2021

Sber — fintech

- Developed backend business logic and APIs within large-scale enterprise financial systems, delivering production services under the reliability and security constraints of a major bank.

SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML/CSS

Frameworks: React, Next.js (SSR / SSG / SPA), Node.js

Backend & APIs: Node.js, GraphQL schema & resolvers, REST, server-side integrations, relational databases / SQL

State & Data: TanStack Query, Zustand, Redux, Jotai, GraphQL, Apollo Client, tRPC

UI & Forms: Tailwind CSS, CSS Modules, Zod, i18n

Architecture: Feature-Sliced Design (FSD), SPA/SSR architecture, performance optimization

Tooling: Git, ESLint, Prettier, Jest, Vercel

LANGUAGES

Russian — native • English — professional working proficiency
